Panama City, Fla.— Bay County received confirmation of one additional case of COVID-19, the novel coronavirus, today. The person ill with the virus is a 68-year-old male who is a Bay County resident. This case is travel related including Washington, DC and Florida. This brings Bay County's total COVID-19 cases to five, including four residents and one non-resident.

The Florida Department of Health in Bay County (DOH-Bay) is now conducting its contact investigations and working on identifying and notifying individuals who will need to self-monitor for symptoms for a 14-day period. Contact investigations are a critical way for staff epidemiologists to track and prevent the spread of disease.

DOH-Bay has been monitoring COVID-19 since January and been in contact with Bay County Emergency Manager and medical providers to prepare response activities in the event we were to see cases in Bay.

As of 10 a.m. this morning, 90 people have been tested for COVID-19 in Bay County, 84 results are negative, and one test is pending. There are two cases in Panama City Beach, one in Lynn Haven, and one in Youngstown.

COVID-19 symptoms and treatment

The symptoms of COVID-19 can mirror illnesses such as influenza. Patients with COVID-19 typically display symptoms such as fever (100.4°F or higher), cough, and/or shortness of breath within 2 to 14 days of exposure to the virus. Approximately 80% of those affected with COVID-19 report mild to moderate illness and experience a complete recovery. Some experience more severe illness. People who are more vulnerable to the illness include individuals who are over age 65 with underlying health conditions, immunocompromised, ill or have underlying chronic health conditions, such as heart disease or diabetes.

Many cases of COVID-19 can be managed at home by treating symptoms, and this is encouraged. However, if you develop worsening symptoms, such as shortness of breath, chest pain, or inability to drink fluids, contact 911 and advise them of your symptoms as you may need treatment at a hospital.

COVID-19 overview, symptoms, and general prevention

COVID-19 is a new type of coronavirus; coronaviruses are a large family of viruses, some causing illness in people and others that circulate among animals. Other coronaviruses include the common cold and

Severe Acute Respiratory Syndrome (SARS). COVID-19 is believed to have emerged from an animal source and is now capable of spreading from person-to-person. There is currently no vaccine to prevent COVID-19.
