**Panama City, Fla.**— Bay County received confirmation of one additional case of COVID-19, the novel coronavirus. The person ill with the virus is a 34-year-old female who is a Bay County resident. This case did have contact with another COVID-19 case and is not travel related. This brings Bay County's total COVID-19 cases to 25, including 24 residents and one non-resident

The Florida Department of Health in Bay County (DOH-Bay) is now conducting its contact investigation and working on identifying and notifying individuals who will need to self-monitor for symptoms for a 14-day period. Contact investigations are a critical way for staff epidemiologists to track and prevent the spread of disease.

A total of 341 tests have been processed for Bay County from private and public labs with 316 negative results. There has been a total of five hospitalizations and one death. The residences of the 24 positive Bay County cases includes; 12 in Panama City, five in Panama City Beach, one in Southport, four in Lynn Haven, one in Youngstown, and one in Tyndall Air Force Base. The non-resident case is from Texas.

### COVID-19 symptoms and treatment

The symptoms of COVID-19 can mirror illnesses such as influenza. Patients with COVID-19 typically display symptoms such as fever (100.4°F or higher), cough, and/or shortness of breath within 2 to 14 days of exposure to the virus. Approximately 80% of those affected with COVID-19 report mild to moderate illness and experience a complete recovery. Some experience more severe illness. People who are more vulnerable to the illness include individuals who are over age 65 with underlying health conditions, immunocompromised, ill or have underlying chronic health conditions, such as heart disease or diabetes.

Many cases of COVID-19 can be managed at home by treating symptoms, and this is encouraged. However, if you develop worsening symptoms, such as shortness of breath, chest pain, or inability to drink fluids, contact 911 and advise them of your symptoms as you may need treatment at a hospital.

### COVID-19 overview, symptoms, and general prevention

COVID-19 is a new type of coronavirus; coronaviruses are a large family of viruses, some causing illness in people and others that circulate among animals. Other coronaviruses include the common cold and Severe Acute Respiratory Syndrome (SARS). COVID-19 is believed to have emerged from an animal source and is now capable of spreading from person-to-person. There is currently no vaccine to prevent COVID-19.
